FABRITARP MATT

Fabritarp Matt is a versatile, matt PVC material that is often used in gyms for punching bags, mats, etc. The matt coating prevents light reflection, which is ideal for indoor spaces. Thanks to its wear resistance, it can withstand intensive use. In addition to various sports applications, it is also suitable for all kinds of covers and bicycle bags.

Mini test

VUPLEX

Source: anwbwatersport.nl, 2015

A miracle cure in a spray can that can do something that will amaze you. That sounds like a vague teleshopping advertisement. Vuplex plastic cleaner and polish is such a product. Spray it on, rub it in a little, and you can see through it again. Yes, sure...

It is a fact that clear plastic ages quickly under the influence of sunlight and weather. Small scratches make it ugly and dull. Whether it concerns plexiglass hatches or the windows in the sprayhood,

Let's start by saying that we are not quick to believe in miracle cures. And to be honest, we prefer not to spend too much time on this kind of thing, because there is so much rubbish on offer. However, this was recommended to us by someone who doesn't normally sell nonsense. And because the product was originally developed for aviation, where you can't get away with nonsense products. Vuplex comes in a spray can and can be used on all plastics and smooth surfaces.

"The result is astonishing!"

after a few years they no longer look good. And in the case of the sprayhood, this inevitably means reduced visibility.

The surface of these plastics is always slightly porous, which causes it to become dirty. And no matter how hard a modern plastic is, it will always get small scratches: from salt, sand, cleaning, you name it. At first, the scratches may be so small that you don't see them immediately, but they do make the material dull.

It cleans, polishes a little and makes the material antistatic, so it doesn't get dirty as quickly. It makes transparent plastic clear again by polishing and filling small scratches.

We tried it on a number of different surfaces and guess what: it works! Dull plexiglass that you can hardly see through becomes clear again by spraying a little bit of the stuff on it, rubbing it in, and voilà – it's true.

There is a limit, however, because really old plastic that is completely damaged and scratched can never be restored to its former glory. However, it works wonders on a sprayhood whose windows have weathered to the point of becoming milky. They simply become beautifully clear again. Even plastic car headlights that had become dull and ugly are like new again. It takes no effort and the results are amazing.

You will need to repeat the treatment every three or sometimes even two months. Because it remains an aid; it does not repair anything, of course.

Conclusion

Vuplex works. Simple and effective. Of course, there is a limit to the weathering and damage that the product can handle. But you will be truly amazed when you see how much it restores transparent plastic. And that's not just empty sales talk!

Technical information: vuplexshop.nl

Water sports enthusiasts find:

Karel van Mierlo:

"It really works, what a great product."

Gijs Staal:

"Also ideal on painted materials."

David Kleinjan:

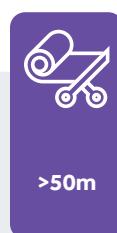

"I can finally see through my sprayhood again."

SPECIALS

For exceptional applications

TAILOR-MADE SPECIALS

Do you need a specialist cloth?
A canvas for extraordinary applications but can't quite figure it out?
Ask us about the possibilities.

Examples of tailor-made specials

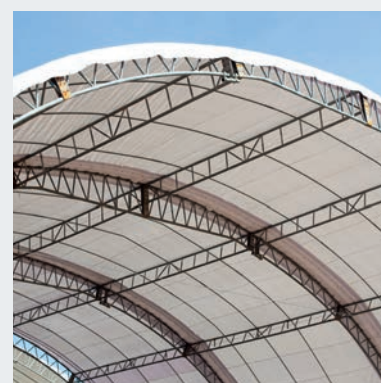

BIOGAS

Whether a fabric is suitable for biogas applications depends on the airtight formula. This can be additionally applied to any type of cloth per 2000lm. As a result, cloths can be suitable for both the inner layer and the outer layer of a biogas plant. The right cloth for each application is put together in consultation.

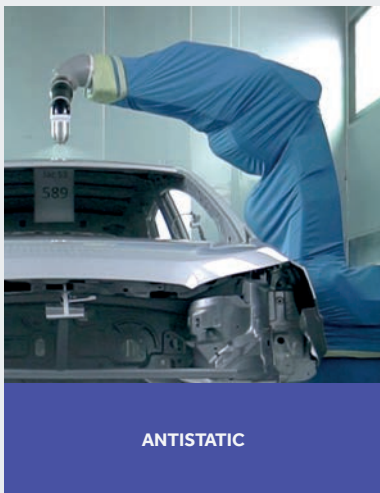

EXTREME FIRE STANDARDS

This type of cloth is especially in demand in the petrochemical industry. Wildeman | van Leeuwen has cloths that even go up to M0 certification. This means "non-combustible" according to French standards. These cloths are often available by the roll or even by the metre.

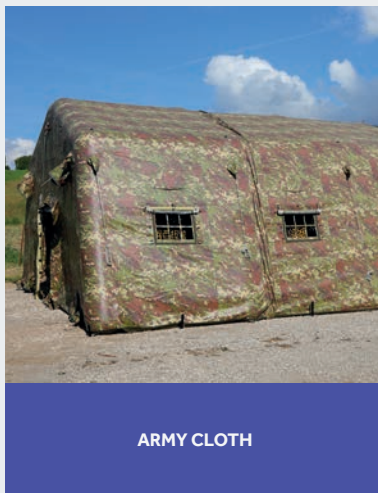

STADIUM ROOFS

Permanent structures are on the rise. A strong PVDF coating makes canvases last for years. This and adequate tensile strengths with an FR standard mean that even stadium roofs are made from them. By sharing a technical drawing, Wildeman | van Leeuwen can help think of a solution.

**ANTISTATIC**

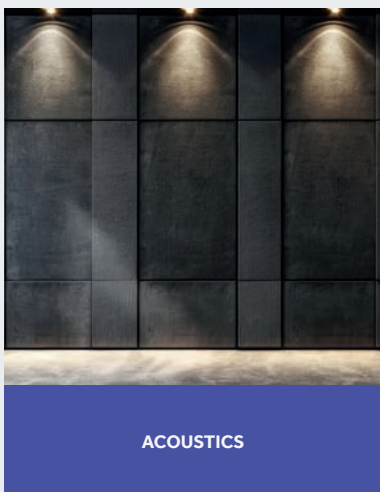

Anti-static tarpaulins are made to help reduce the build-up of static electricity. They are used in environments where static discharge can damage sensitive electronic components, such as in the electronics industry, laboratories and cleanrooms. They can also suffice as covers.

**ARMY CLOTH**

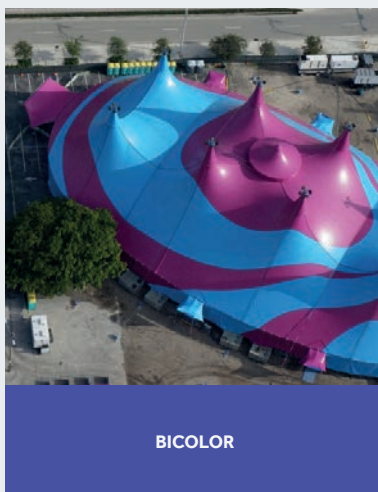

Army cloth can be made in all camouflage colours on request. It is also possible to apply anti-infrared so that you are less noticed by the enemy. Making the cloth flame-retardant to the right requested standard is no problem per minimum production.

**INSULATING**

Insulating fabrics are important both thermally and acoustically. The fabric is available with a PVC foam in several thicknesses. Ask us for the technical value of the various fabric types. Solutions are possible from as little as one roll.

**ACOUSTICS**

Improves room acoustics. Serge Ferrari has a complete range of soundproofing solutions that can be used for both ceilings and walls. These cloths are often available by the metre.

**BICOLOR**

Suitable for special productions in a Type 2 Bicolour at a competitive price. Available per roll or per 2000lm. References can be supplied on request.

**ANTIVIRUS & BACTERIAL**

In times of the Corona pandemic, Serge Ferrari has come up with some innovative solutions in their Agivir range. These took into account different applications and cloth types against viruses and bacteria.

FLEXLIGHT DUALTONE

Flexlight Dualtone 702 is darkening and offers unlimited colour matching possibilities. These UV-resistant European-made membranes perfectly meet the requirements of circus tents.

Winner Pittman Innovation Awards 2018

SUREFAS CAF-COMPO Snap Studs

Source: sailmagazine.com, 16 January 2018

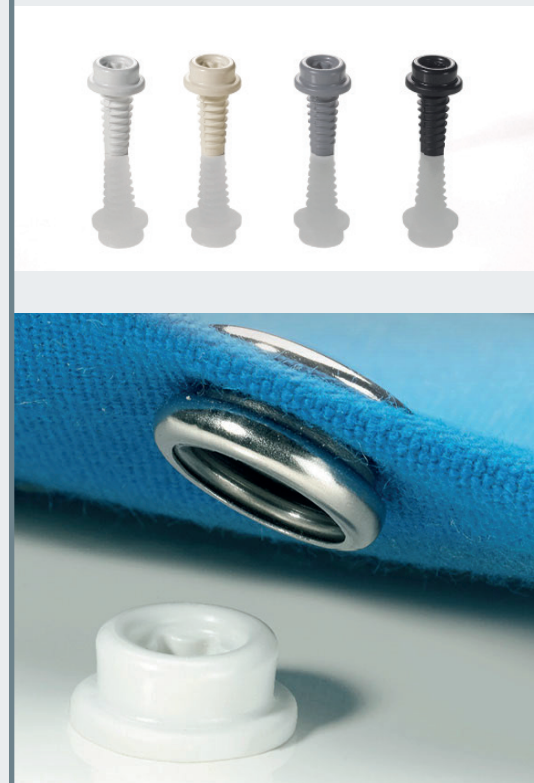

Normally, our Pittman Award winners are chosen almost exclusively for their technology and design, especially in the systems category.

However, aesthetics also played a role in the selection of these composite studs. Not only that, but this aspect of their design played an important role in the positive reactions the snaps received during the recent METS trade fair in Amsterdam in November.

stud or ring spring fastening system.

They are moulded from a highly durable UV-stabilised composite with self-tapping threads and can be installed in fibreglass, plastic or wood using a Torx 30 screwdriver bit in a manner similar to conventional metal studs.

A variant with M6 metric machine threads is also suitable for tapped holes in aluminium, steel and other hard substrates.

"Moulded from highly durable UV-stabilised composite"

In photographs for brochures and other marketing purposes, boat builders usually do not want the small stainless steel circles typically used to attach fabric panels to distract attention from the lines of the boat. As a result, press studs are often only installed after the photographs have been taken.

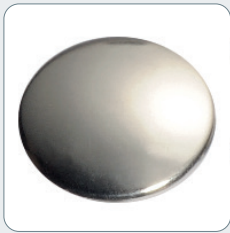

However, with these Surefas Caf-Compo press studs, which are available in white, cream, light grey and black (or any custom RAL colour that a production buyer may require for their application), this is no longer a problem. Because the press studs are not made of metal, corrosion and the resulting stains are practically no longer an issue.

When in use, the studs serve as the base component of a fabric press

*Why SUREFAS
CAF-COMPO Snap Studs?*

1. **The top two windings are completely intact for optimal grip;**
2. **Waterproof, even without sealant;**
3. **UV-stabilised and no wear and tear;**
4. **100% corrosion-free on aluminium.**

“Easy to use and superior safety!”

For 60 years, LOXX® has been an indispensable solution for quickly and securely fastening tarpaulins, sprayhoods, bimini tops and awnings on boats. Whether for sunshades or rain covers, windbreaks and storm sails, tarpaulins or protective covers: this ingenious fastener is the easiest, fastest and safest fastening solution!

The LOXX® safety lock always consists of two parts. It closes and locks automatically. The durable stainless steel spring of the upper part fits precisely around the ball head of the lower part and locks. The clever mechanism only opens when the cap of the upper part is lifted and the ball head is released. LOXX® as a safety lock is reliable in use, durable in production and surprises with its innovative design.

What is LOXX® and how does it work?

Source: esails.nl

1. LOXX BIG HEAD

The head is placed in the sail, hood or sunshade and can be attached to a self-tapping screw, piece of fabric, plate, window clip, etc.

Instructions for use:

Loxx press stud heads are very easy to attach, as they can be installed without sewing or using tools.

For elastic and soft fabrics, cut a 9 mm hole or punch it out with a punching tool. Please note that for sturdy fabrics or leather, a larger hole of 10 mm must be punched. Insert the screw thread through the hole, screw on the ring and tighten it with the small LOXX key.

2. LOXX LOWER PLATE FABRIC

The fabric piece is the opposite of the "standard" Loxx Cap. Very handy for mounting a small solar panel on the hood or connecting pieces of sail or fabric, for example.

Instructions for use:

The fabric piece is very easy to attach, as it can be installed without sewing or tools:

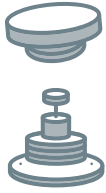

- 1) For elastic and soft fabrics, cut a 9 mm hole or punch it out with a punching tool. Please note that for sturdy fabrics or leather, a larger hole of 10 mm must be punched.
- 2) Insert the screw thread through the hole, screw on the ring and tighten it with the small LOXX key.

3. SELF-TAPS

The special feature of LOXX® screws is that they consist of three parts:

The screw thread is always made of saltwater-resistant stainless steel; the ball head and hexagon are made of stainless steel or nickel-plated copper.

The function of self-tapping screws is evident from their name: the screw is designed in such a way that it taps its own screw hole in the surface by making a twisting motion. We recommend pre-drilling to the thickness of the screw core.

MINAX

Minax is a quick fastening system for combining two materials, particularly valued in the construction of boats (sailcloth) or motorhomes (awnings). It is similar to the LOXX and Tenax systems, but the fact that it is made of plastic has the great advantage that the Minax fastener does not rust.

- ✓ Easy to assemble
- ✓ Made of plastic, prevents scratches on paintwork
- ✓ Economical and weatherproof closure system

Unique to Minax

Perfect for use in (salt) water environments because Minax does not rust!

PRESS BUTTONS

Prym is a quality brand for press studs, among other things, and is used to attach fabric to a surface, such as a boat. The press studs are strong and made of stainless steel to prevent rusting.

TOURNIQUETS

Tourniquets (oval) hold the tarpaulin in place. Attach the corresponding eyelet and washer to the fabric and then slide them over the tourniquet. When you turn the tourniquet a quarter turn, it holds the tarpaulin behind the tourniquet. These tourniquets are nickel-plated copper and therefore rust and wear-resistant.

KEDER & KEDER RAILS

KEDER & KEDER RAILS

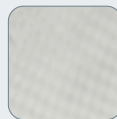

Keder is the perfect combination of keder rails, keder (flags) and fabric. The fabric is stitched or welded to the keder (flag). The keder rails (or keder profile) are mounted on your veranda or other structure. You then slide the keder into the profile.

ADHESIVE & TAPE

SABA CONTACT

Are you working with truck tarpaulins, rubber boats or pond liners? Then **SABA 70T** is your partner. This adhesive does not “fight” against plasticisers, but is completely resistant to them. Are you working with boat cushions, dashboards or headliners? **SABA AAC** offers unprecedented heat resistance up to 180 °C.

Saba Contact 70T

Perfect for: waterproof PVC repairs and transparent joints.

The result: a rock-solid, flexible bond that will withstand years of wind and weather.

Saba Contact AAC

Perfect for: bonding foam, leather and textiles to wood or metal

The result: immediate grip and a seam that stays tight even in the blazing sun.

MAINTENANCE & CLEANING

PVC & FOIL

Cleaning PVC and foil requires care: always use a soft cloth and do not apply high pressure to the surface. The cleaning agent should be pH neutral and non-corrosive.

Ferrari Clean Spray

Cleans PVC cloths

VS.

VuPlex

Cleans and polishes transparent plastic

Makes foil clear again

VS.

IMAR Polish

The formula based on polymers forms a protective barrier against the harmful effects of environmental pollution.

Safe and effective for transparent vinyl

VS.

IMAR Cleaner

Unique formula to clean, shine and protect Strataglass

UV-inhibitors reduce age-related brittleness and prolong flexibility

Minitest

VUPLEX

Source: anwbwatersport.nl, 2015

“Het resultaat is verbluffend!”

Conclusion

Vuplex works. Simple and effective. Of course, there is a limit to the weathering and damage that the product can handle. But you will be really surprised when you see how much it revives transparent plastic. And that's not just empty sales talk!

TOOLS

CUTTING & TRIMMING

Cutting or trimming fabric or leather to size, for example, is precision work in which the right tools play a major role.

Wildeman

van Leeuwen

Scissors

The scissors have traditionally been suitable for cutting thinner materials. The heavy-duty version also cuts thick materials flawlessly and offers better leverage and more power when cutting.

VS.

Break off knife

The break off knife is a handy and strong knife that you can easily slide in and out. The handle is designed to provide a comfortable grip.

VS.

Circular blade

The circular blade rolls like a wheel through materials such as (artificial) leather, both thin and thick. Suitable for cutting with both a push and pull motion.

VS.

Hotcutter

The Hotcutter is an electric tool with a heated blade that can be used to cut or shape synthetic materials and to seal them.
