PRÉCONTRAIT® TECHNOLOGY

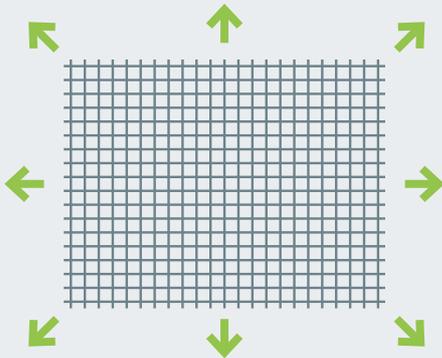

A Précontraint® coated fabric is:

- a woven base fabric made of high-strength polyester threads;
- a coated fabric in which the fabric is kept under constant tension in both the warp and weft directions throughout the entire production process (see diagram on the left);
- a layer of high-quality surface polymers, more evenly distributed across the surface of the yarns;
(in other words: lower weight offers better protection)
- a dirt-repellent surface treatment.

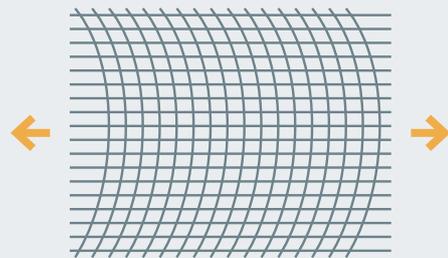

PRÉCONTRAIT®

CONVENTIONALLY COATED

UNIFORMITY

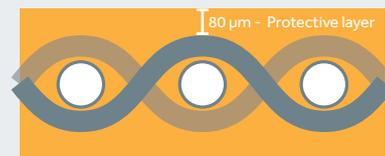

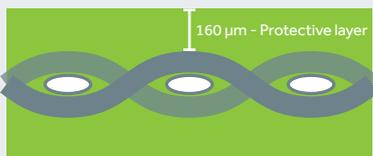

Fully controlled uniformity,
identical in all production batches.

Significant deformation and variation
depending on production batches.

PROTECTION AGAINST UV RAYS, POLLUTION AND WEAR AND TEAR

100 HOURS UNDER STRESS
