# VUPLEX

Source: [anwbwatersport.nl](http://anwbwatersport.nl), 2015

A miracle cure in a spray can that can do something that will amaze you. That sounds like a vague teleshopping advertisement. Vuplex plastic cleaner and polish is such a product. Spray it on, rub it in a little, and you can see through it again. Yes, sure...

It is a fact that clear plastic ages quickly under the influence of sunlight and weather. Small scratches make it ugly and dull. Whether it concerns plexiglass hatches or the windows in the sprayhood,

Let's start by saying that we are not quick to believe in miracle cures. And to be honest, we prefer not to spend too much time on this kind of thing, because there is so much rubbish on offer. However, this was recommended to us by someone who doesn't normally sell nonsense. And because the product was originally developed for aviation, where you can't get away with nonsense products. Vuplex comes in a spray can and can be used on all plastics and smooth surfaces.

*"The result is astonishing!"*

after a few years they no longer look good. And in the case of the sprayhood, this inevitably means reduced visibility.

The surface of these plastics is always slightly porous, which causes it to become dirty. And no matter how hard a modern plastic is, it will always get small scratches: from salt, sand, cleaning, you name it. At first, the scratches may be so small that you don't see them immediately, but they do make the material dull.

It cleans, polishes a little and makes the material antistatic, so it doesn't get dirty as quickly. It makes transparent plastic clear again by polishing and filling small scratches.

We tried it on a number of different surfaces and guess what: it works! Dull plexiglass that you can hardly see through becomes clear again by spraying a little bit of the stuff on it, rubbing it in, and voilà – it's true.

There is a limit, however, because really old plastic that is completely damaged and scratched can never be restored to its former glory. However, it works wonders on a sprayhood whose windows have weathered to the point of becoming milky. They simply become beautifully clear again. Even plastic car headlights that had become dull and ugly are like new again. It takes no effort and the results are amazing.

You will need to repeat the treatment every three or sometimes even two months. Because it remains an aid; it does not repair anything, of course.

## Conclusion

*Vuplex works. Simple and effective. Of course, there is a limit to the weathering and damage that the product can handle. But you will be truly amazed when you see how much it restores transparent plastic. And that's not just empty sales talk!*
